The New NEC VT800 Projector: Bright Solution at a Great Price

NEC's VT800 bright projector solution gets The Royal Treatment.

I set up the new NEC VT800 in a very busy area at DA. Everyone who passed by commented on the brilliant clarity of the screen, which confirmed my opinion that the VT800 projects the brightest image I'd seen in recent projector releases. I have to admit that the 2,700 lumens surpasses what most of the projectors I review are packing. This one could certainly easily handle larger room projection needs. Set up was easy and I was projecting brilliant images, in moments, from my laptop and even a document camera.

The VT800 at \$999 is at a very affordable price range for education. Beside its 2,700 lumens, features include XGA native resolution of 1024 x 768, contrast ratio of 500:1, up to 3,000 hours of lamp life, and a 5-watt speaker. Users will really like 3D Reform, which squares the image by adjusting horizontally, vertically, or diagonally when the projector cannot be placed parallel or perpendicular to the screen. Additionally, the VT800 features HQV (Hollywood Quality Video) technology for improved video and data display, and Advanced AccuBlend, which ensures detailed images when using non-native resolution sources.
